

Keynote Panel Discussion: Planning for a Sustainable Water Supply in Lakewood and Beyond

Tuesday, November 1; 2:00 PM, Little Theatre

Keynote Panel Discussion: Planning for a Sustainable Water Supply in Lakewood and Beyond

Preceded by a brief student presentation on water quality issues in Lake Carasaljo and the Metedeconk River.

Water supply and water conservation issues are of vital importance in New Jersey right now. As population increases and townships plan for increasingly dense developments, the problems of providing a safe, clean water supply for citizens—while retaining adequate water supplies in rivers, streams, and aquifers for healthy ecosystems—become more acute. River and stream levels are already falling precipitously low in dry summers, and the water supply and its safety for humans and wildlife alike are an increasing concern in our area.

Join us for this informative and engaging panel that will showcase the need for a water supply plan in this region and be a catalyst for developing the necessary process to create that plan.

Moderator: Lisa Auermuller, Watershed Coordinator at Jacques Cousteau Reserve, Rutgers University

Panelists: Senator Robert W. Singer (R-Ocean); Justin Flancbaum, Executive Director, Lakewood Municipal Utilities Authority; Robert Nicolson, Supervisory Hydrologist, U.S. Geological Survey; Peg Sturmfels, Program Organizer, New Jersey Environmental Federation; Richard Bizub, Director of Water Programs, Pinelands Preservation Alliance

Admission to all events is free. Guest registration is requested to ensure that there is sufficient seating for all guests. To register for any event, please contact Trish Passuth, director of service learning, at 732.987.2713 or passutht@georgian.edu.
