

LIVING SHORELINES

Wednesday, November 30th 2011

6:30 – 8:00 p.m.

Berkeley Recreation Center

630 Route 9, Bayville NJ

Hard edges don't go well with healthy fish habitat. For example, over 70% of the Barnegat Bay shoreline is bulkheaded and the subsequent loss of shallow waters in the bay has contributed to declines in fish.

Join American Littoral Society staff as they explore more naturalistic alternatives to bulkheads that have been proven to protect both property and fish.

ATTEND OUR WORKSHOP TO LEARN ABOUT LIVING SHORELINES

What are they?

What are their benefits?

Why are they the preferred method for shoreline erosion issues?

THIS WORKSHOP IS APPROPRIATE FOR MUNICIPAL OFFICIALS & THE GENERAL PUBLIC

Agenda to follow

Please RSVP by Wednesday, November 23rd
